Task 2. Questions:

- 1) Who thinks that robots will be commonly used in classrooms in 2024?
- 2) How can robots help teachers with non-teaching work?
- 3) Do robots have any advantages over doctors?
- 4) Are teachers leaving because they feel stressed or because they are being replaced by robots nowadays?
- 5) There are not enough teachers in the world, aren't there?

Task 3.

Robots in the field of education
(Source: Ian Wright's article for The News)

Nowadays robots are capable of doing various jobs. But some professions require like doctors and teachers require human connection. Although, robots already have some advantages over doctors. (For example, diagnosing illness better. teaching

Spending of education, Anthony Seldon, British education expert, predicts the common use of robots in classrooms in 2024. He thinks that machines will do the information transferring and the teachers will perform as assistants.

There's a global problem nowadays - the lack of teachers, which is caused by overworking. Teachers spend too much time doing non-teaching work. This is exactly what robots can be useful for. Machines could help checking homeworks and doing reports so that

teachers could save up energy for their work that requires human connection.

In my opinion, robots are the solution to the problem of the lack of teachers. As soon as the job becomes easier, there'll ~~will~~ be more people attracted to the occupations in the field of education.

Task 4.

31

I suddenly turned into a balloon flying in the sky. I instantly realised that something's wrong as I was floating above the ground, unable to move. Luckily, it wasn't a windy day so I couldn't be blown away.

"How is it possible? What should I do now?" I screamed.

Suddenly, I saw my friend passing by. It was Elly, my classmate.

"Hey, Elly! I'm over here, please help me!" I shouted.

"What? Where are you? I can't see you!" she answered.

"I'm literally a balloon right in front of you." I said.

She looked very confused but took me in her hands with no hesitation.

"Is that really you? How could this happen?" Elly sounded a bit worried.

"I have no idea, but for now, I can't move myself, that's why I need your help." I answered.

"Alright, but we have to solve this problem. You can't stay like this for the rest of your life, you know." she answered.

Suddenly we both saw a little girl dressed like a magician. She was holding a magic wand. Elly looked at her angrily.

"Now what have I told you, Sue? You're not supposed to leave the house alone while I'm gone to do some shopping!" Elly said. Looks

(126.1)

like that girl was her little sister.

"But you know I need somebody to test my magic on! How can I do it if there's no one home? Besides, I'm not supposed to use magic on my family. So you, Elly, are excluded. - Sue giggled.

"So you did this? You turned my friend into a balloon?" Elly asked.

"Oh, yes, it was me. You know, this body form suits your friend better." Sue said with a slightly evil grin on her face.

"You turn her back into human right now! If you do, I'll buy you that box of sweets you've been begging Mom to buy." Elly said.

"Now that's a deal!" Sue said and instantly turned me back into human. Then she suddenly vanished.

I looked at Elly with confusion.

"What in the world was it? Did you know your little sister is a magician?" I asked.

"No. Honestly, I've got no idea how this happened. But, I guess, I'm going to have her a lot of problems about it..." Elly said and sighed.

whenever it
 naturally was.
 they ~~at~~ arguments
 and arguments.
 I guess I should
 somehow make
 her stop using
 magic... or
 I have no idea, but
 what in the world was it.
 I said with a really confused look on my face.

said with an evil face. This kid surely was a disaster.
 "Alright, it's a deal, just turn my friend into human." My answered.
 And then she ~~was~~ she was told, and I became a human again. After it she
 suddenly disappeared.

Robots in the field of teaching
 (Source: Ian Wright's article for
 The News) 7

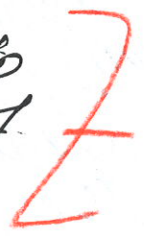

Nowadays robots are capable of
 doing various jobs. ~~For example, they are~~
~~already replaced lots of jobs~~
~~on factories and plants.~~ But ^{professions} 31
 like doctors and teachers require
 human connection and creativity.

Although, robots already have
 some advantages over doctors. For
 example, diagnosing illness. 12

Speaking of education, Anthony
 Seldon, the British education expert,
 predicts the common use of robots
 in classrooms in 2025. He thinks
 that machines will do the information
 transferring and the teachers will
 perform as assistants. 79

~~Speaking of which,~~ There's ~~an~~ a
 global problem nowadays - the lack
 of teachers, which is caused by
 overworking ~~and stress~~. Teachers spend
 too much time doing non-teaching work.
 This is exactly what robots might be useful
 for. Machines could help checking
 homework and doing reports so that
 teachers could save energy for their work.

that requires connection. But
 In my opinion, machines can help to solve the ~~global~~ problem of the lack of teachers by making this job easier. It can also

In my opinion, robots are the solution to the problem of the lack of teachers. ~~By making~~ As the job becomes easier, there will be more ^{soon} ~~students~~ ^{people} attracted to the jobs in the field of education.

+ 147	"You were the ³⁴ one who did it?!"	181
+ 34	"How is that possible?" the Elly shouted.	
181	"And you were the one who said magic doesn't exist. See now?"	165
	It does ^{really} does. - Sue laughed. only	16

I suddenly turned into a balloon, flying in the sky. Sounds unbelievable, right? I instantly realised that something was wrong as I couldn't move my limbs anymore. I found myself floating over above the ground. Luckily, it wasn't a windy day so I ~~didn't~~ couldn't be blown off!

"What should I do now? How could something like this ever happen?" I screamed.

Suddenly I saw my ~~school~~ friend passing by. It was Elly, my classmate.
 "Hey! Elly! I'm over here, please help me!" I shouted.

"What? Where are you? I can't see you!" she answered.
 "I'm literally a balloon right in front of you!" I said.
 She looked very confused but took me in her hands with no hesitation.

"You turn her back into human right now, young lady!" - Elly ordered.
 "Too bad, I ~~can't~~ ~~can't~~ ~~can't~~ how to do it. Well, maybe I have the idea, but #27!!
 do it myself! you buy me that one huge box of sweets from the store. Oh!
 But you promised that you wouldn't get me one, too bad. Unless... - Sue

"What in the world is going on?" she asked with a really surprised face.

"I don't know! I was walking home and suddenly turned into a balloon. And now I've got nothing to do as I can't even move myself. That's why I need your help. ~~until we find out what~~

"Alright, alright, I'll lend you a hand but what should we do about it? You can't stay like this for the rest of your life." Eddy said with a slightly ironic smile on her face tone.

Suddenly ~~they~~ ^{we} both heard a childish giggling from the back. When Eddy turned around, still holding me in her ~~arm~~ hands, we both could see a little girl dressed like a ~~witch~~ magician. She was holding a magic wand. Eddy looked at her angrily.

"Now what ~~did I tell you~~ ^{did I tell you} have I told you, Sue? You're not supposed to leave the house alone while I'm gone to the store!" Eddy said. Look like this little girl, sue, was her little sister.

"You know I need to practice ~~my~~ magic using someone! ~~If no one's home,~~ there's nobody at home who I could use as my experiment, you know. And I'm not supposed to use my family for these kind of things, so you ^{Eddy} ~~are~~ ^{are} excluded."

Sue said with a serious ~~face~~ ^{face}. Look on her face.

Then the little one ~~too~~ noticed the balloon Eddy was holding, which was actually me.

"Oh, look who it is! My experiment! You know, this new body form of yours suits you better." Sue said with a slight evil grin on her face.
