1. What is better: to have no teacher or to have a machine as your teacher?
2. Is there a chance, that ^{machines} robots will ever gain empathy?
3. What are the reasons behind teachers quitting their jobs?
4. * Majority of people share Anthony Seldon's opinion on robot teachers, don't they?
5. How much time does a teacher spend a week marking homework?

+100

N°3

A lot of people are sure, that there is no place for robot teachers or doctors. However, Ian Wright does not follow the crowd. He expressed his point of view in the article for "The News" called "Robot teachers?". According to it, despite still struggling with working with people, machines can already help doctors by diagnosing diseases.

-1 (P)

The writer mentions Antony Seldon - an education expert. Seldon believes, that by 2027 robots will do the main teaching job with human teachers as assistants. In Ian Wright's opinion it is likely to be vice versa, which I agree with. The author brought up a lot of reasons for mechanical assistants: teachers spend too much time on mandaine tasks, they overwork and often end up quitting.

-1 (O)

There is one point everyone agrees with: it is better to have a robot teacher than to not get any education.

N°4

Suddenly, I turned into a ballon, flying high in the sky. I was just under fluffy white clouds, so I could see the scenery under me. It was breathtaking.

endless fields full of bright yellow wheat, big strong trees, barely noticeable villages and a huge lake. I could look at this view for hours.

I was staring under me, when the realisation hit me: „Wait. This is not normal. Why am I in the sky?!“ I tried to stop moving, but failed to do so. Fear and anxiety started to take me over: I was floating hundreds of kilometres above the ground, moved by the wind. There were a couple more attempts to stop, none of which gave results. I did not have anything with me and I was far away from my home, maybe even my country.

While I was deep in my thoughts, I saw an airplane. Firstly, I did not pay it much attention, until I understood, that the plane was moving towards me with a heck-breaking speed. Before I could do anything, I was hit by a plane. All I could see was pitch black...

But this lasted only a few seconds. I nearly jumped in surprise, when I saw another person in front of me. He was sitting in some kind of an armchair, the back of his head facing me. I looked around: everyone was sitting in those, even I. „I am inside a plane“ - I came to conclusion. Turning my head to the left, I noticed my mother. „Oh!“ - gasped my mum, - „You seem to finally be awake. Our plane lands in 10 minutes.“ I was still bewildered and only nodded in response. „Don't forget any of your belongings.“ - she added.
