Task 1. C E B D A
+ + + + +

105. (Себеюность
семь данноб)

- Task 2. 1. Why robots can work better with patients than doctors?
- 2. When will robots replace teachers according to Anthony Seldon?
- 3. How can we provide enough teachers for the children in places with no proper education?
- 4. What are the main problems teachers are faced with in their work?
- 5. Which parts of the job can be replaced by the robots?

Task 3. In the text "Robot teachers?" written by Ian Wright and published in "The News" magazine we are presented with a topic regarding jobs being replaced by the robots, particularly the teachers' work. The author informs us that robots can perform not only the mechanical work, such as cleaning or working on a factory, but also those types of the jobs that involve creativity and interaction with humans. We are presented with a statement that teaching professions will be replaced by 2024. After that an issue of not having enough teachers is discussed. Furthermore, the author explains how the robots can help teachers instead of taking their jobs away. For example, the robots can check the students' homework. Meanwhile, the teachers will spend their time on doing a more valuable work. In my opinion, a compromise between the teachers and the robots is the best solution to this issue.

Task 4. ~~2~~ An incredible adventure with my uncle

I suddenly transformed into a balloon flying in the air twenty meters above the ground with no signs of help. It all started in my house where I was laying on a bed reading a fantasy book about a traveler telling ~~me~~ unusual stories about his journeys. My uncle came into the room and told me to get up. "Stop reading this nonsense! You need to touch grass sometimes!" he exclaimed. "I don't think this book can be called 'nonsense'. In fact, these events ~~could~~ ^{can} ~~even~~ probably happen in the real life," I answered in a calm manner, not wanting to argue with my uncle. Indeed the book was so compelling, so captivating I could almost believe the author.

We ~~went~~ ^{went} for a walk in a park that was located nearby. The weather was warm and nice, the sun was shining and the birds were singing. I was retelling the contents of the book to my uncle. "There is even a spell that lets you transform into anything you want!" I explained passionately. "And how do you unspell yourself?" asked uncle. "Turn around three times and make a roaring sound," I answered. We were passing by a small forest when something strange started emerging from there. It was an old mage, with beard going down to his feet! This was the moment I turned into a balloon and started flying away. My uncle reacted quickly and punched the mage in the face. This was enough for the old man to disappear. Then, to my surprise, uncle started turning around and roaring ~~ed~~ like a tiger. The next moment I was on the ground, laying in my normal form. To our shock, the spells from the book actually worked, and thanks to them I was saved by my uncle.
